

DOCUSHARE INTERFACE PROGRAM (DSIP)

The sophisticated multifunctional interface for Docushare document management

The ISS DocuShare Interface Program facilitates heads-up indexing and document review. Its primary interface has 3 resizable panes for the document, folders and fields.

Enhanced Feature Set

- Elaborate DocuShare search and query capability where queries can be saved as desired
- Audit trail tracks all document and document field changes as well as user actions and even document properties
- Extended security is available for defining users and groups directly in DSIP
- Support of many file formats with the ability to zoom, pan, deskew, despeckle, rotate & crop
- Twain-compliant scanner support
- "Rubber Band" OCR
- Document import & data tag import from PC file, XML, ODBC-compliant databases & other formats
- E-Mail select documents directly
- Export documents to many destinations
- Automated field updates, mass updates, and document archival
- Document copy, replace and annotation, such as rubber stamp

Additional Benefits

- This system has been optimized for rapid indexing and image retrieval from one intuitive interface. Overall this highly facilitates efficient document processing and data entry.
- It's high level of security and sophisticated audit system helps allow for auditable compliance with HIPAA, 21 CFR Part 11 and other industry standards
- Various automated processes such as "rubberband" OCR, automated field updates, mass updates and document archival also provide a considerable return on investment in reducing data entry time
- Extended features such as direct scanner support, E-mail, import and export also save time and add value to this product
- The ISS DocuShare Interface Program works well to help integrate an environment and facilitate linking document images and related field data to other business applications. ISS offers full services in support of this type of system integration.
